

Adjustable Guide Rails

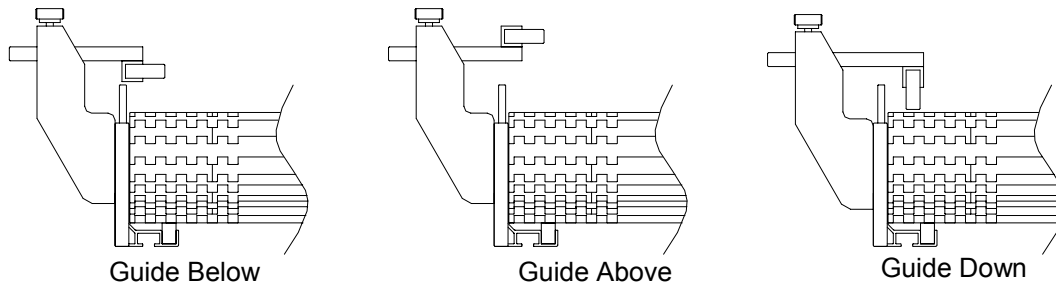

Product Description

SmartMove® conveyors come equipped with removable 1" high guard rails. However, some conveyor applications may require the product to be "steered" or "guided" as it moves along the belt. Our adjustable guide rail system consists of vertical mounting blocks that attach anywhere along the length of conveyor sideframe with "T" nuts.

Round support arms fit through the mounting blocks and can be locked by a knob mounted on top of the block. The support arms are then screwed to the "C" channel supported UHMW guide bars. The single screw arrangement allows the guide rail to swivel to accommodate angled guidance systems.

The guide rails can be mounted to the support arms either above or below and can also be positioned vertically facing down. (For guiding plates and thin circuit boards.) Please see the figures below.

Guide rails are purchased in 1 foot increments starting at 2' long and up to 10'. Guide rails are ordered separately for each side of the conveyor. When ordering, please specify the inward adjustment range, "stroke" required for the application.
