

Remote Mount Emergency Stop

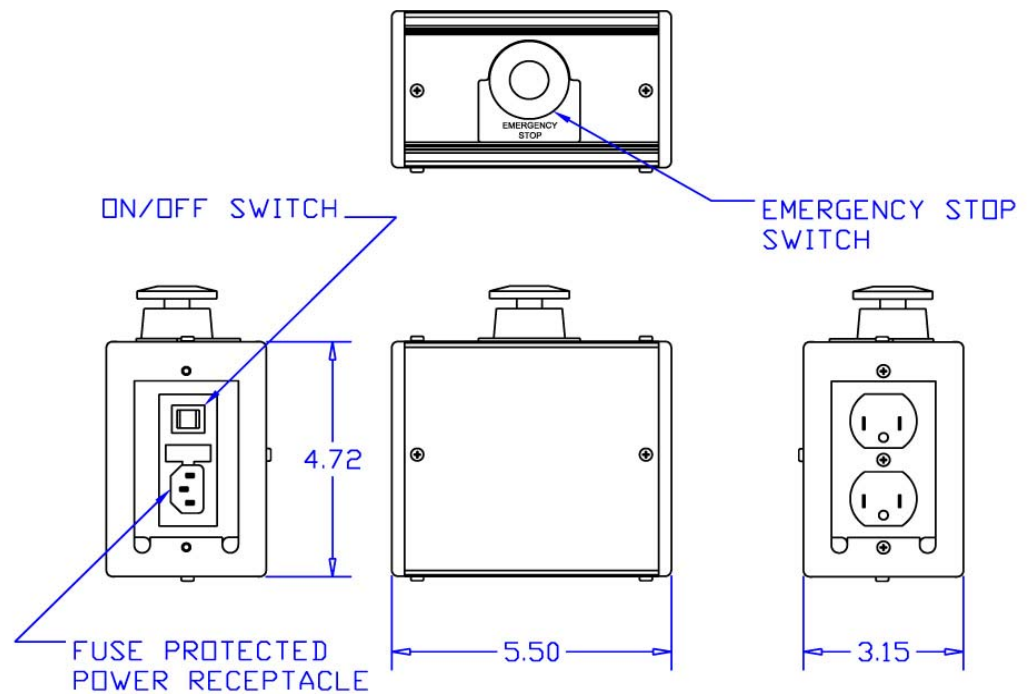

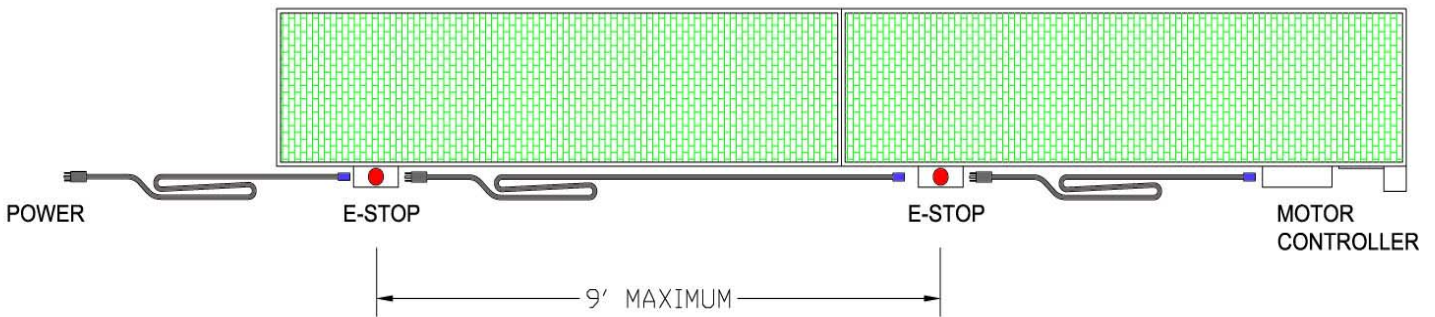

Product Description

The emergency stop box assembly provides a quick and easy way to shut off the power to any SmartMove® Conveyor plugged into the E-stop box's switched outlets. Simply mount the E-stop box on any side of the conveyor within 9' of the motor controller. Plug the E-stop box into a standard 115V outlet with the 9 foot cable provided. Plug the conveyor into one of the two switched outlets on the E-stop box.

Pressing the red mushroom head E-stop switch will shut off power to the outlets. Push and twist the mushroom head button to release and reapply power to the outlets.

Outlets are fuse protected to a total of 7 amps at 115VAC. Remote E-stops can be mounted up to 9 feet away from each other to create multiple remote stopping capability.

Note: It is normal for the conveyor belt to remain moving for a few seconds when the E-stop is activated. *If you need to accurately start and stop the conveyor, please consider our Remote Control Start/Stop Switch Assemblies.*
